Mission Statement:

To protect, preserve and enhance the natural resources of the watershed of the South Fork and its tributaries through voluntary and community support.

The South Fork water quality project began in May 1999, with a group of interested residents and business leaders indicating support to establish a comprehensive watershed program. The focus of the Alliance is to improve and enhance the current water quality status within the watershed of the South Fork of the Iowa River. Together with Tipton and Beaver Creek the South Fork drains approximately 200,00 acres in Hardin, Hamilton, Franklin and Wright counties. We believe our mission is a fundamental part of Iowa's overall environmental goals.

Support Water Quality in the Southfork Iowa River Watershed! Join or renew your membership!
